Full Life Cycle Service ensures that at any stage of the project – from design through to commissioning – the only company responsible is Australian Fire Control

100% QUALITY

Metashield fire shutters are an ideal solution for providing fire compartmentation and security.

Available in galvanised, painted and stainless steel finishes the system is suited to extra large openings.

The system has a vertically standing barrel with head track which operates sideways from the wall.

This configuration is ideal for large opening with limited head room.

So why the Metashield L fire shutter ?

Metashield fire shutters incorporate patented design features that allow continuous spans of up to 14m wide. X 7m drop.

The system can also curve and weave around objects.

Approvals cover unlimited lengths, but require design input by Australian Fire Control.

The largest fire shutter system available;

- Fire tested up to 2 hours (-/120/-) in accordance with AS1530.4 and AS1905.2
- Operates sideways much like a sliding fire door but with much less side wall space required when in the open position
- Available in galvanised, painted or stainless steel finish
- Maintenance services available, please contact our maintenance department.
- High quality fittings that will last the life of the product
- Horizontal and laterally operated fire shutter systems also available

100% Customer Service

Australian Fire Control offers obligation free technical support throughout your design and documentation stage. We are also happy to provide obligation free pricing so that you can accurately prepare your budgets

We have also prepared a complete kit for your documentation requirements. Simply download from our web site a complete set of specifications and drawings. If you would like our drawings in DWG format, simply give our technical department a call or email your request.

We will endeavour to respond to your emails the same day !
